

MICROSOFT INTERNET EXPLORER SECURITY SETTINGS FOR USING PROUNIT

User's Internet Explorer requires some security settings to be able to run ProUnit correctly.

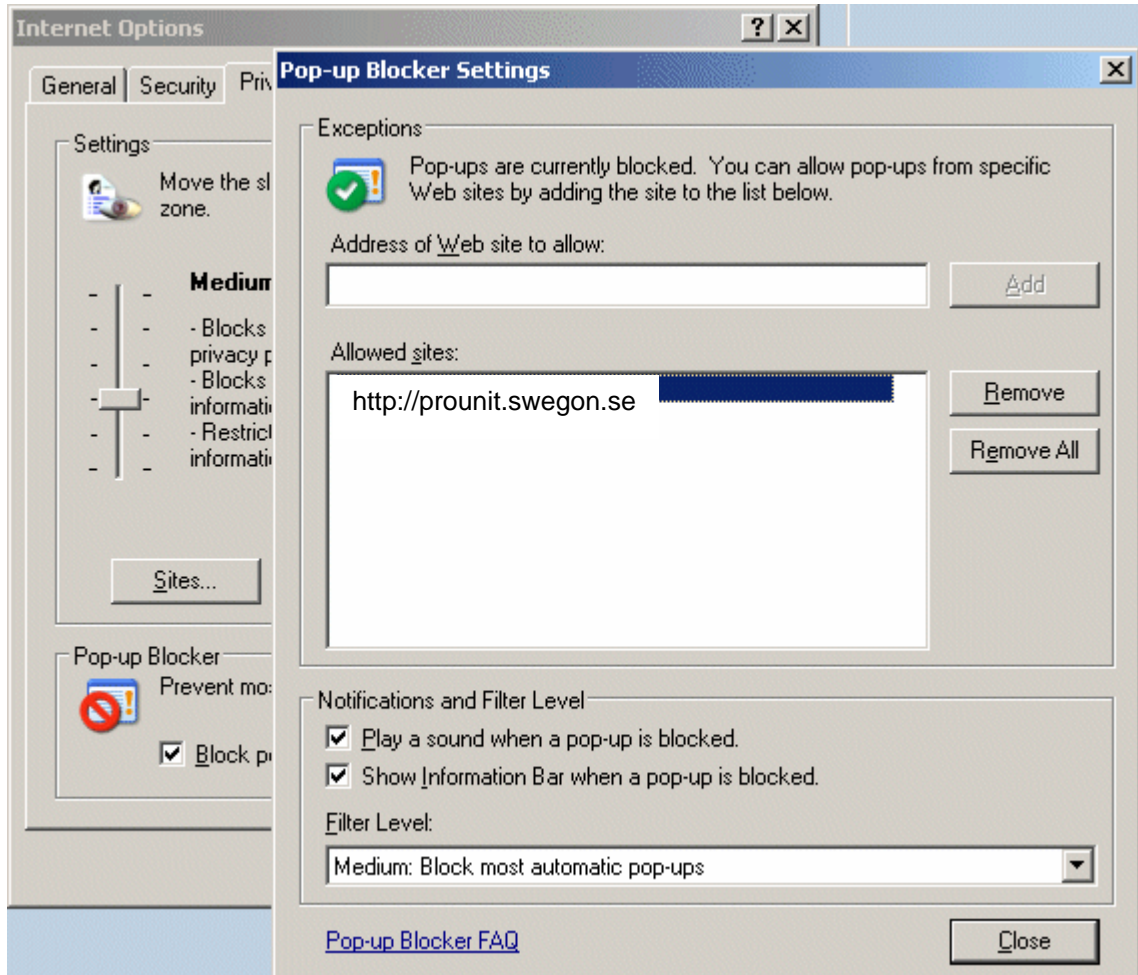

Cookies

ProUnit requires cookies to be enabled. If you experience problems with using ProUnit, enable cookies for ProUnit's server.

Pop-ups

ProUnit uses pop-up window for showing printouts. Therefore ProUnit's server address should not be blocked by pop-up blocker. E.g. user can add ProUnit's server address to the allowed sites.

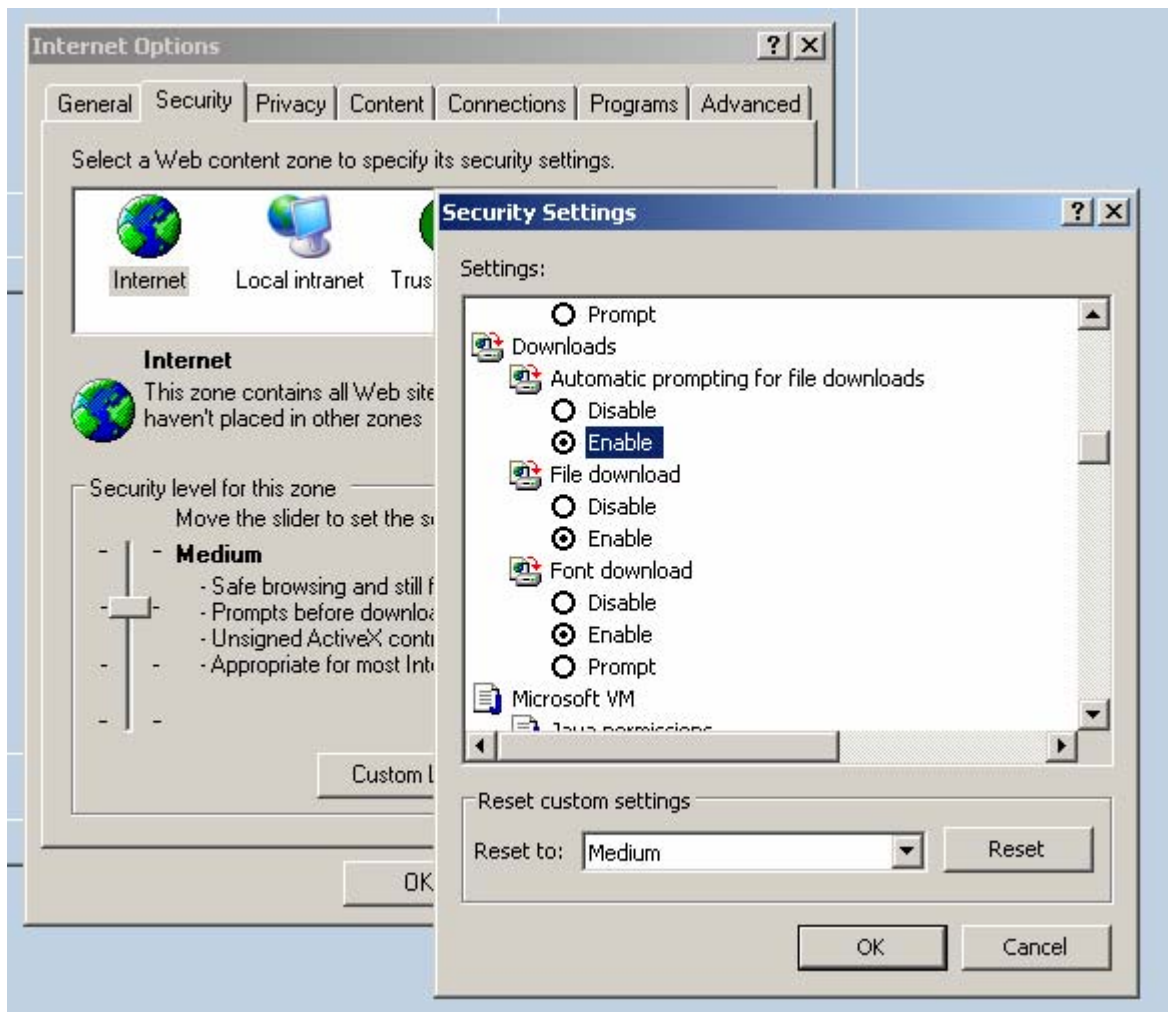

Automatic downloads

ProUnit uses automatic downloads for printouts. Therefore it must be enabled for ProUnit's server address. There are two ways of doing this.

Solution 1.

Check security settings for Internet Zone:

“Automatic prompting for file downloads” and “File download” should be enabled.

Solution 2.

If user's company's security policy does not allow the first solution then ProUnit's server address can be added to Trusted Sites Zone. And there user can enable automatic downloads.
